Assignment-1

Long Term Virtual Internship – Data Analytics using Tableau

1.Bar Chart

Purpose:

A bar chart is used to compare quantities across different categories.
It represents data with rectangular bars whose lengths correspond to values.

- **Steps by step process:**

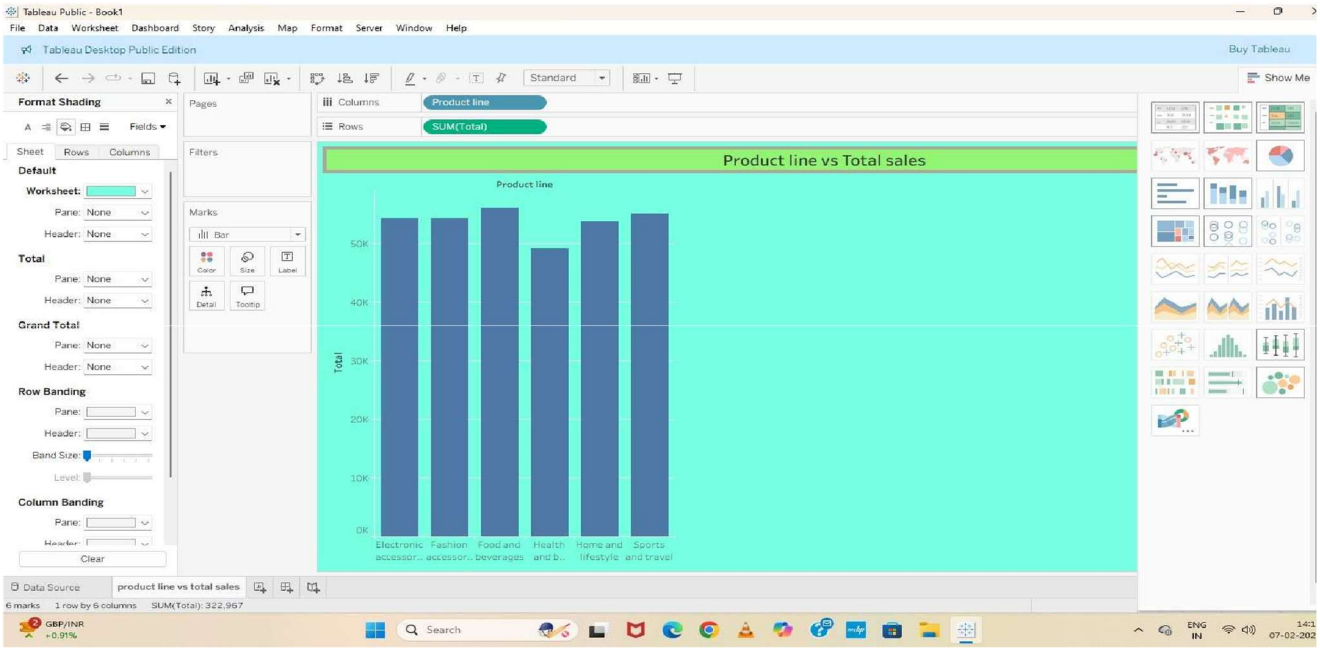
Step – 01: Create a New Sheet and name it as “Bar Chart”

Step – 02: Drag product line to column

Step – 03: Total to Rows

Step – 04: Product line to Marks (to Add color) Output:

Edit title:**product line vs Total sales**



2. Prepare Pie Chart:

Purpose:

A pie chart is used to show how a whole is divided into different parts.

It represents data as slices of a circle, with each slice showing a percentage or proportion**.**

- **Steps by step process:**

Step - 01: Create a New Sheet and Renamed as “Pie Chart”

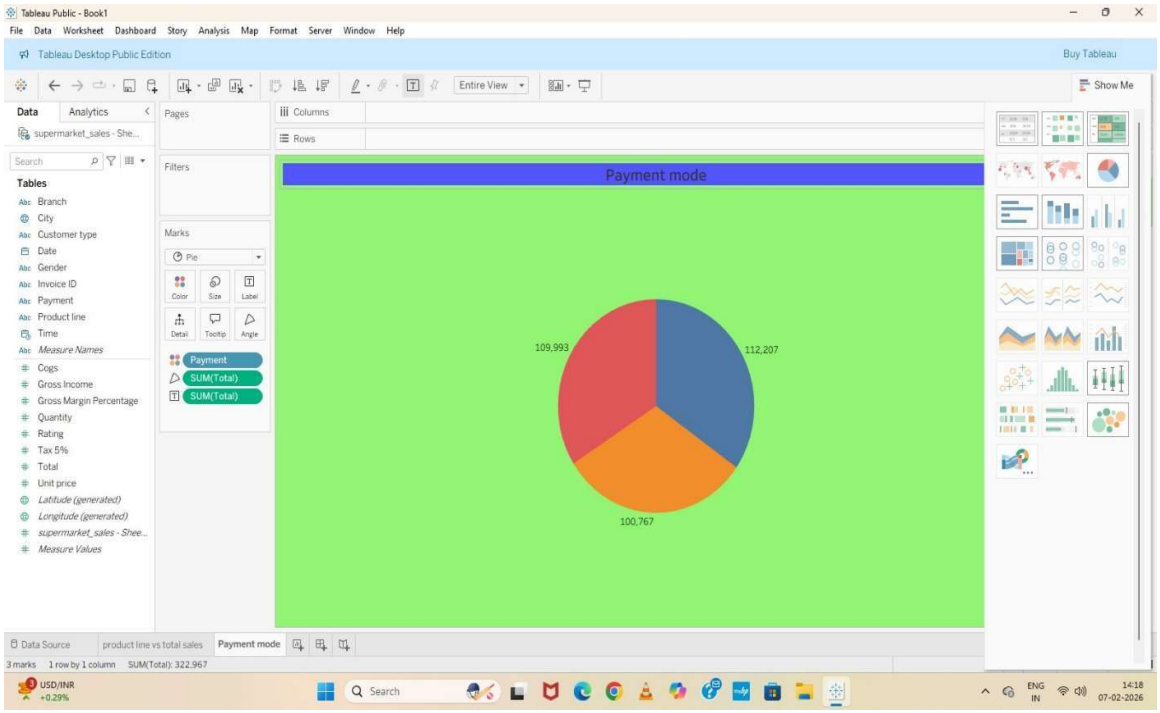
Step - 02: Drag payment to Columns

Step - 03. Drag Total to Rows

Step - 04. Add payment to color

Step - 05. Add Label to total->right click on Label->select quick table calculation->click

Edit title:**payment mode**



3. **Prepare Stacked Bar Chart**

Purpose:

A stacked bar chart is used to compare total values across categories while also showing their sub-parts.

It displays data as bars divided into segments, with each segment representing a component of the total.

Step by step process:

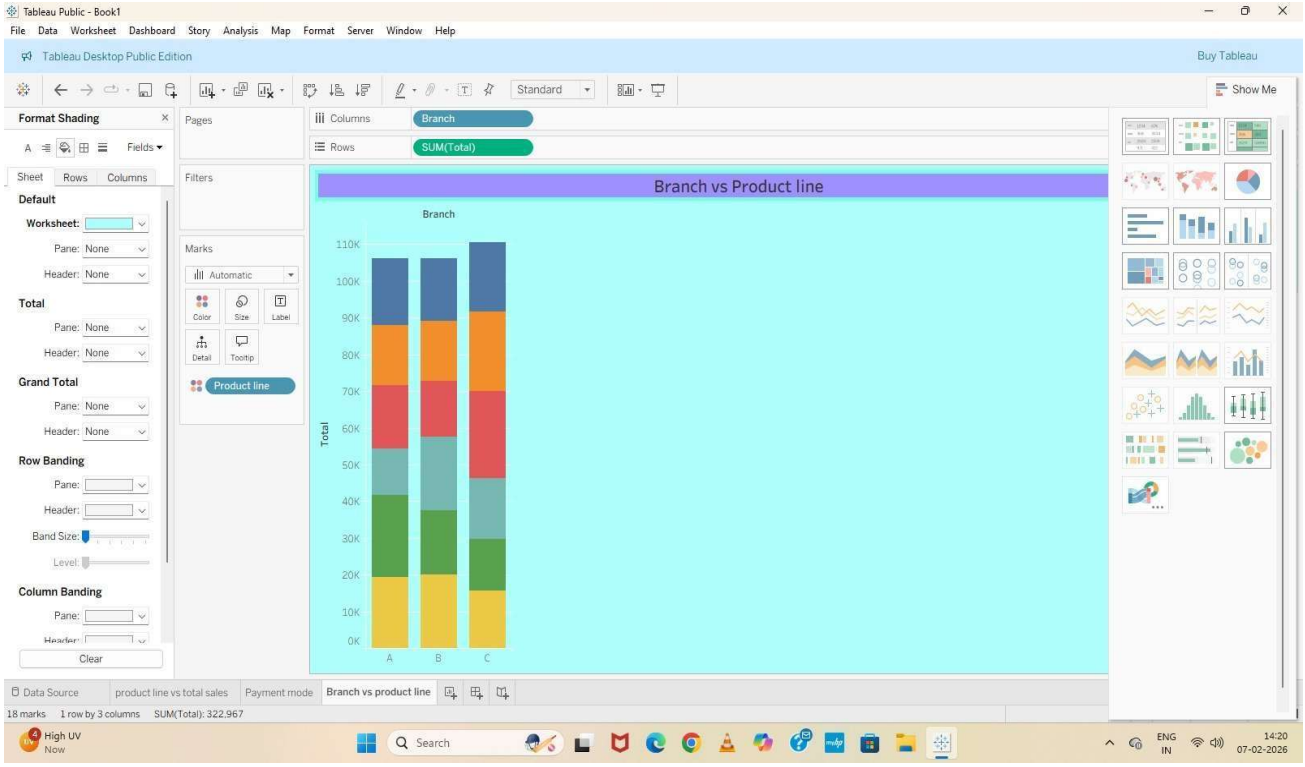
Step-1: Create a New Sheet and Renamed as “Stacked Bar Chart”

Step-2: Drag Branch to columns

Step-3: Total to Rows

Step-4: Drag payment to marks and add color

Edit title : **Branch vs Product line**



4.Prepare Line Chart

Purpose:

A line chart is used to show trends or changes over time.

It represents data points connected by straight lines.

Step by step process:

Step-1: Create a New Sheet and Renamed as “Line Chart”

Step-2: Drag Date to Columns

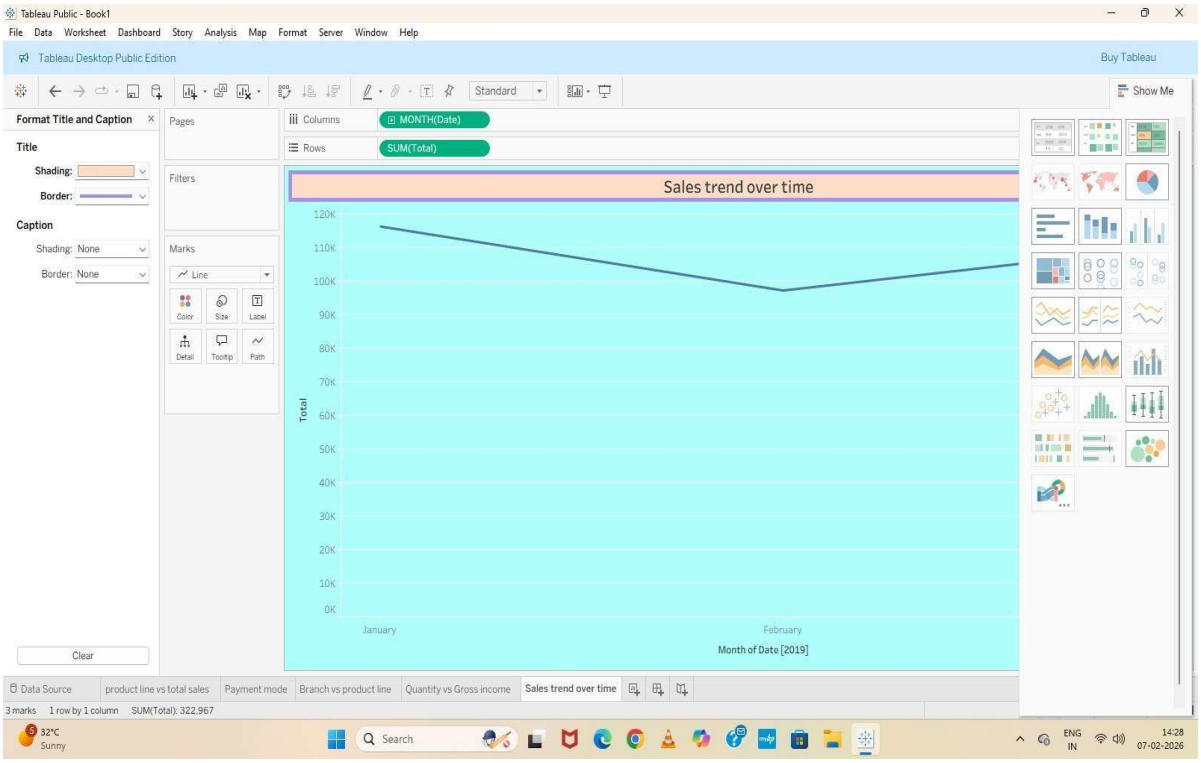
Step-3: Drag Total to Row

Step-4: click the Drop down arrow on Date(in columns)

Step-5: select Month->then select line on Marks

Step-6: Drag Branch on color(Marks card) Add color as your choice

Edit title:**Sales trend over time**



Assignment-2

Long Term Virtual Internship DataAnalytics using Tableau

DonutChart:

Purpose:

- The purpose of this visualization is to:
- Show total sales distribution by region (Central, South, West).
- Compare regional contributions to overall sales.
- Display Total Sales in the center of the donut.

Step by step process:

Step–01:CreateaNewSheetandRenamedas “Donut Chart”

Step–02:DragProductline-columnsselectonlyone

Step–03: ClickMarks card-Select Pie fromdropdown-Drag

- Product line → Colour
- Total → Angle
- Total → Label

Step–04:Create→CalculatedFieldNameit:DonutEnterformula:0ClickOK

Step – 05: Drag Donut → Rows (twice) (So Donut appears two mes in Rows)

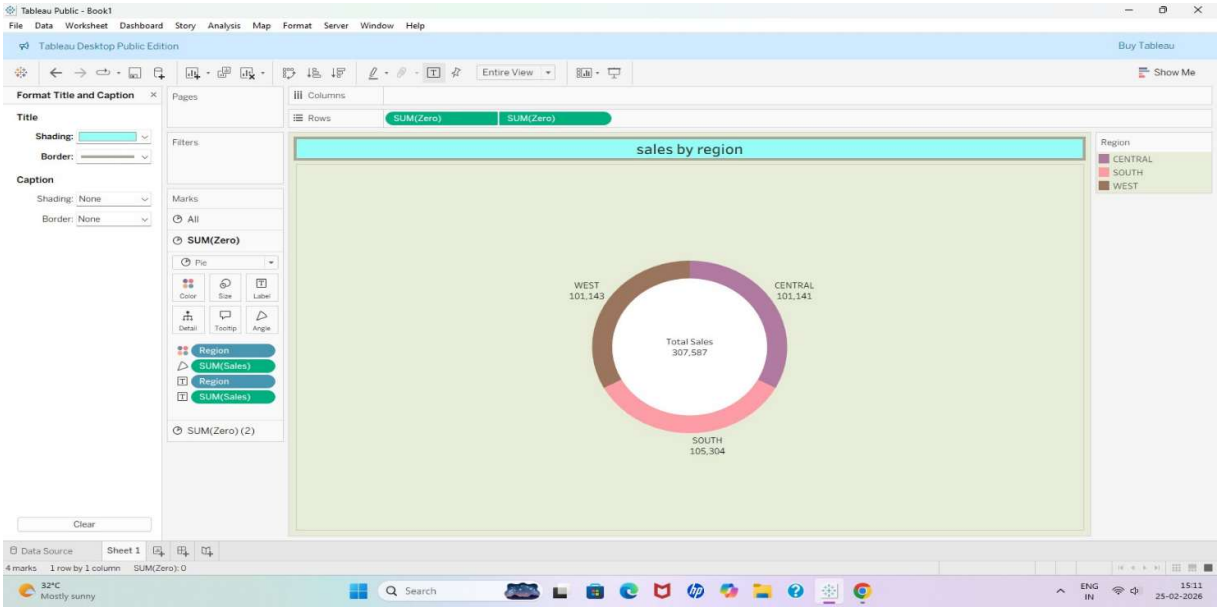
- Right-clickonsecondDonut→SelectDualAxis
- Right-click again→SynchronizeAxis

Step–06:FormatInnerCircle(Hole)FirstMarksCard(OuterPie) On Marks(Donut)-Firstone:

- Type = Pie
- Product line → Colour
- Total→Angle
- Total→Label
- Increase Size
- On Second Marks Card (Inner Circle) - Click Second Marks ((Donut)

- Step – 07: Drag payment to colours

Edit title:**Sales by region**



2. PrepareAreaChart:

Purpose:

- This area chart shows the total sales trend over time (month-wise). • It helps track whether sales are increasing or decreasing • Different colors represent sales by each branch.
- It is useful for analyzing monthly performance and growth patterns.

Step by step process:

Step– 01:CreateaNewSheet andRenamed as“Area Chart”

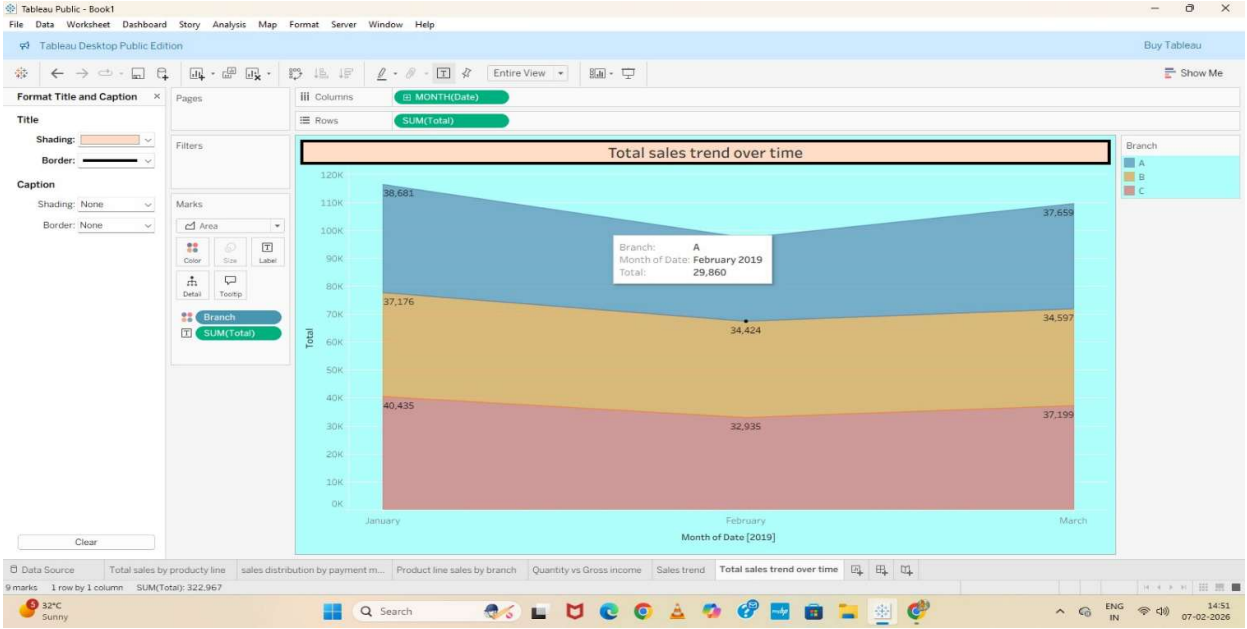
Step–02: DragDate→Columnsshelf-Clickthedrop-downonDate- SelectMonth

Step-03:Drag Total → Rowsshelf

Step-04: ClickShowMe (topright)SelectAreaChart

Step-05: Drag city → Colour (in Marks card)

Edit title: **Total sales trend over time**



3.PrepareTextTable:

Purpose:

- A text table is used to organize information clearly in rows and columns.
- It helps present data in a simple and structured format.
- Text tables make comparison and reading easier.
- They are commonly used in reports, documents, and records.

Step by step process:

Step–01:CreateaNewSheetandRenamedas“Text Table”

Step-02:Ontherightside,findShowMe.ClicktheTextTable(PivotTable)icon Step–03: Drag

Date→Columnsshelf

Step – 04: From the Data Pane (left side), drag these fields to Rows

- Invoice ID
- Branch
- City

- Customer type
- Gender
- Product line
- Date
- Time
- Payments

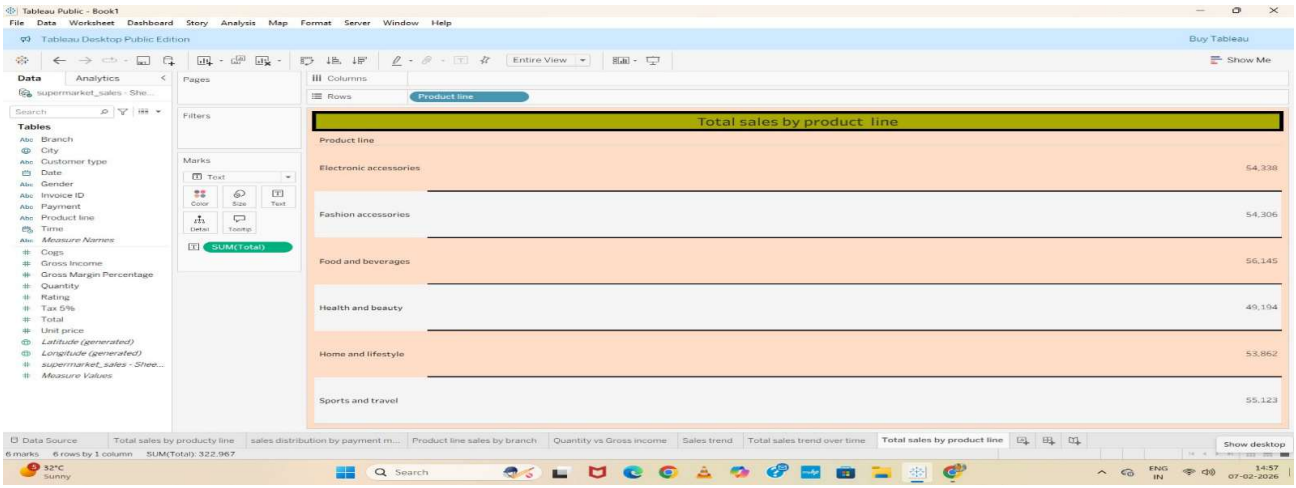
Step–05:DragMeasurestoColumns(orText)

Step–06:NowdragtheseMeasures:ToColumns:

- Unitprice
- Quantity
- Tax
- Total
- COGS
- Grossincome
- Grossmarginpercentage
- Rating

Step–07:SetMarksTypetoText-OnMarksCard,clickthedropdown-Select Text Table

Edit title: **Total sales by product line**



4.PrepareHighlightedTable:

Purpose:

- A highlighted table is used to emphasize important data within a table.
- It uses colors or shading to draw attention to key values or categories.
- Highlighted tables make patterns, differences, or critical information easier to identify.
- They are commonly used in reports and dashboards for quick understanding.

Step by step process:

Step–01:CreateaNewSheetandRenamedas“HighlightedTable”

Step–02:DragProductline→Rows

Step – 03: Drag Branch → Columns

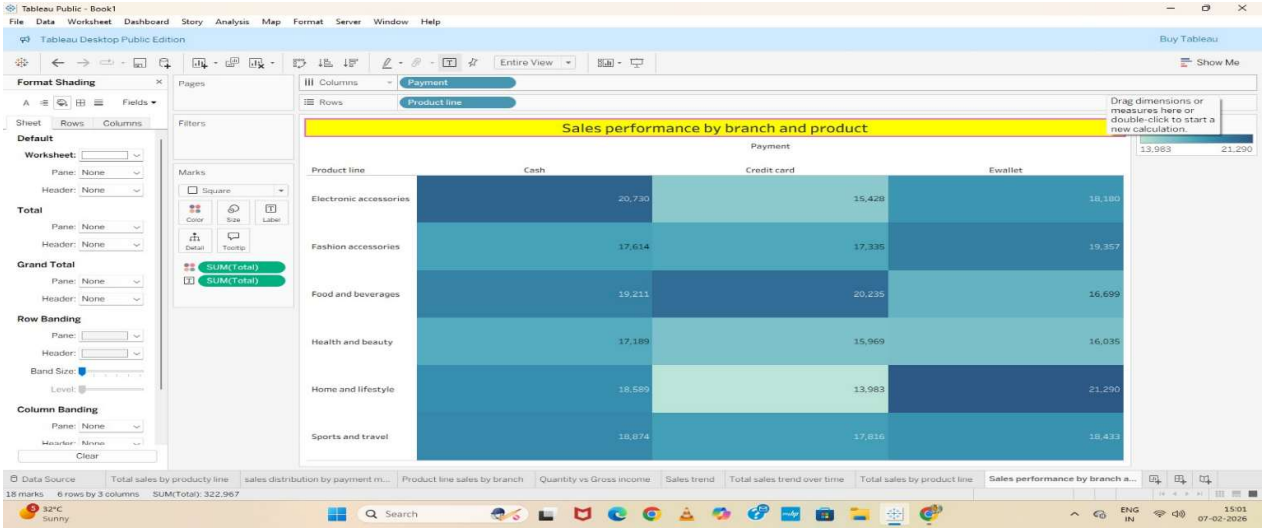
Step – 04: Drag Total → Marks → Colour On the Marks card, Click the drop-down → Select Square

Step–05:InMarks card→SizeDragslidertotheright untilsquaresfillthecells. Step – 06: Drag

Total → Label -Click Label → Show Mark Labels

Step–07:ClickColour→EditColoursChooseacolourpalette-ClickApply→Ok

Edit title: **Sales performance by branch and product**



5.PrepareWordCloud:

Purpose:

A word chart is used to visually represent words based on their frequency or importance.

It highlights key terms to make main ideas easy to identify.

Word charts help summarize large amounts of text quickly.

They are commonly used in presentations, text analysis, and reports

Step by step process:

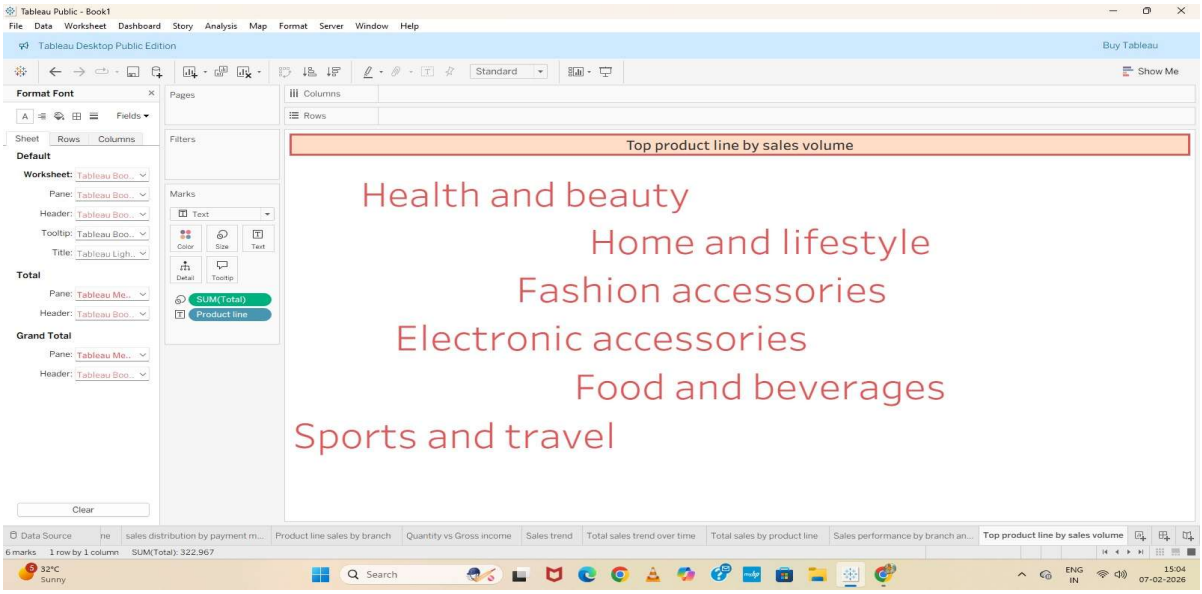
Step–01:CreateaNewSheetandRenamedas“Word Cloud” Step–02: In theMarks card-Clickthedropdown-SelectText.

Step – 03: Drag Product line → Drop on Text Click Text → Increase font size

Step–04:DragTotal→DroponSize -ClickSize→Increaseslider

Step – 05: Drag Total → Drop on Colour

Edit title: **Top product line by sales volume**



6.PrepareFunnelChart:

Purpose:

- A funnel chart is used to show stages in a process and how values decrease at each step.
- It helps visualize conversion rates or drop-offs between stages.
- Funnel charts make it easy to identify where losses or reductions occur.
- They are commonly used in sales, marketing, and recruitment processes.

Step by step process:

Step–01:CreateaNewSheetandRenamedas“FunnelChart”

Step–02:OnMarks Card-SelectBar

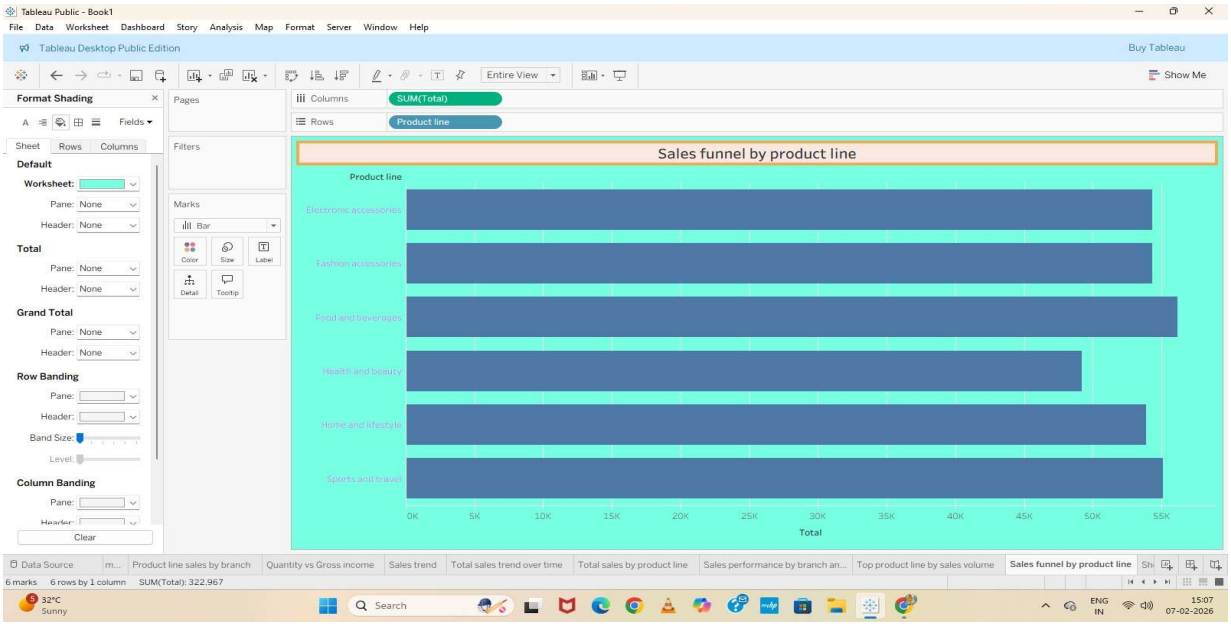
Step – 03: Drag Measure Values → Columns-Edit filters

Step – 04: Drag Measure Names→ Rows-It automatically shows in filter

ClickSort→Descending(largesttosmallest)

Step–05:Rightclickonsheet-clickonFormat-GotoFormat Shading-clickon worksheet -change colour.

Edit title: **Sales funnel by product line**



7.PrepareWaterfallChart:

Purpose:

- A waterfall chart is used to show how an initial value is affected by a series of positive and negative changes.
- It helps visualize the cumulative effect of sequential data points.
- Waterfall charts make it easy to track increases, decreases, and the final total.
- They are commonly used in financial analysis, budgeting, and performance tracking**.**

Step by step process:

Step–01:CreateaNewSheetandRenamedas“WaterfallChart”

Step–02:DragProductline→Columns-SelectAll

Step – 03: Drag Running Total→ Rows

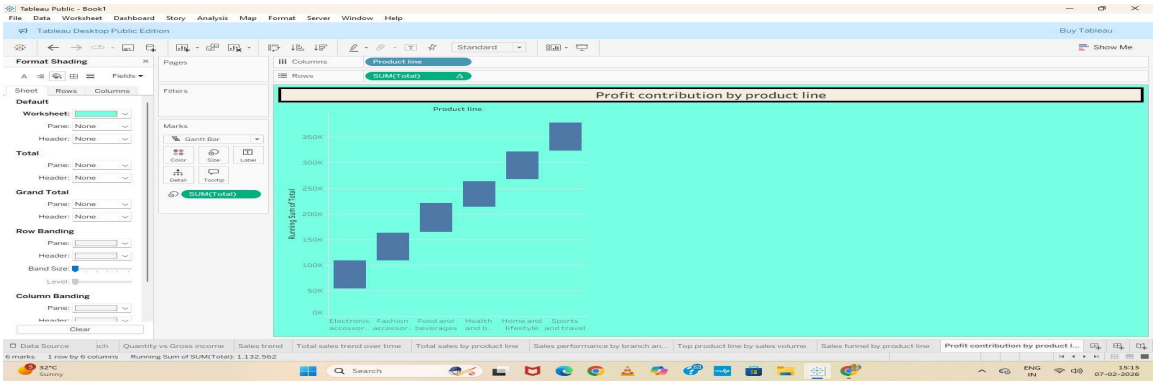
Step–04:ClickShowMe-SelectGanttBar

Step–05:Right-click→CreateCalculatedFieldName:Difference

Formula: SUM([Total])-Click OK

Step – 06: Drag Difference → Size (Marks card) Step–07:

DragDifference→Colour

Waterfall Chart


Edit title: **profit contribution product line**
