Measuring The Pulse Of Prosperity: An Index Of Economics Freedom Analysis
Project Report

1.INTRODUCTION

Measuring The Pulse Of Prosperity:

Economic freedom is the fundamental right of every human to control his or her own labor and property. In an economically free society, individuals are free to work, produce, consume, and invest in any way they please. In economically free societies, governments allow labor, capital, and goods to move freely, and refrain from coercion or constraint of liberty beyond the extent necessary to protect and maintain liberty itself.

Importance:

- It helps understand how economic freedom influences national prosperity and development.
- It provides insights into how government policies affect entrepreneurship, investment, and employment opportunities.
- It enables comparison between countries based on economic performance and freedom levels.
- It assists policymakers, researchers, and students in identifying economic strengths and weaknesses.
- It highlights the relationship between economic freedom and indicators such as GDP growth, income levels, and poverty reduction.

Project Overview:

"Measuring the Pulse of Prosperity" focuses on analyzing the Index of Economic Freedom, which evaluates how supportive a country's economic environment is for individuals and businesses.

Purpose:

- To understand the concept and components of economic freedom.
- To evaluate countries using the Index of Economic Freedom.
- To examine the relationship between economic freedom and economic growth.
- To identify policies that promote economic efficiency and sustainable development.
- To create awareness about the role of economic institutions in shaping prosperity.

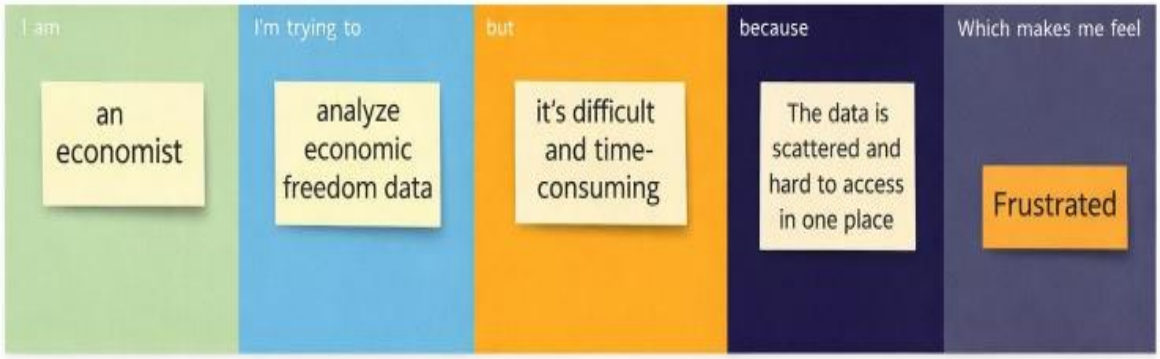
2.IDEATION PHASE

Customer Problem Statement

A strong customer problem statement for measuring the pulse of prosperity through an Index of Economic Freedom analysis would be:Governments, investors, and policy makers struggle to accurately measure and compare the true drivers of prosperity across countries. Traditional economic indicators such as GDP growth do not fully capture the institutional and policy environments that enable long-term wealth creation. There is a need for a comprehensive analytical framework that evaluates the degree of economic freedom — including property rights protection, regulatory efficiency, government size, rule of law, trade openness, and market competitiveness.

I am	Describe customer with 3-4 key characteristics – who are they?	A **government** official, investor, or policy maker tasked with assessing and advising on economic conditions and policies in a global context.
I'm trying to	List *their outcome or "job" they care about – what are they trying to achieve?*	**Accurately measure** and compare the true drivers of prosperity and economic freedom across different countries.
but	Describe what problems or barriers stand in the way – what bothers them most?	Traditional economic indicators like GDP growth don't **fully capture** the institutional and policy environments that enable long-term wealth creation, making it difficult to identify and address **structural issues.** (¬ra2 12C)
because	Enter the "root cause" of why the problem or barrier exists – what needs to be solved?	There is a lack of a comprehensive, clear, and **comparable analytical framework** that evaluates key aspects of economic freedom such as property rights, regulatory efficiency, trade openness, and the rule of law.
which makes me feel	Enter the "root cause" of why the problem or barrier exists – what needs to be solved?	There is a lack of a **comprehensive, clear,** and comparable **analytical framework** that evaluates key aspects of economic freedom such as property rights, regulatory efficiency, trade openness, and the rule of law.
	Describe the emotions from the customer's point of view – how does it impact them emotionally?	**Frustrated, uncertain**, and powerless to effectively evaluate economic environments, attract investment, and advocate for impactful reforms.

Example:



Problem Statement (PS)	**I am (Customer)**	**I'm trying to**	**But**	**Because**	**Which makes me feel**
PS-1	a policy researcher/economics student	to analyze how economic freedom influences prosperity across different countries	I struggle to interpret and compare multiple economic freedom indicators in a clear and measurable way	the data is scattered across sources and lacks a unified analytical framework	confused and uncertain about drawing reliable conclusions
PS-2	a policymaker/economic analyst	to identify which components of economic freedom most strongly impact economic growth and living standards	Find it difficult to quantify the relationship between economic freedom scores and real-world prosperity outcomes	economic performance is influenced by many interconnected variables	challenged and cautious in making evidence-based policy recommendations.

Empathy Map:

This empathy map, created for the project “Measuring the Pulse of Prosperity: An Index of Economic Freedom Analysis,” captures the mindset, environment, challenges, and motivations of stakeholders interested in economic freedom and prosperity. It illustrates what they think and feel—recognizing the importance of economic freedom, worrying about prosperity and growth, desiring better policies, and aspiring toward sustainable economic development. It highlights what they hear from economists, policymakers, and media sources, all of which shape their understanding and opinions. It also shows what they see in their environment, such as economic news, country comparisons, and global rankings of economic freedom, reinforcing their awareness of how nations perform relative to one another. The map further reflects what they say and do, including discussing economic policies, debating regulations and reforms, analyzing economic data, and advocating for greater economic freedom. Finally, it outlines their pains—concerns about slow growth, excessive regulations and bureaucracy, lack of transparency, corruption, and inefficiency—alongside their gains, such as a strong desire to understand economic freedom more deeply, seek data-driven insights, measure prosperity accurately, and develop effective policy recommendations. Overall, the empathy map provides a comprehensive view of the stakeholders’ perspectives, struggles, and goals, guiding the project to align its analysis and outcomes with their real needs and expectations.It explains the thoughts, feelings, and needs of people who are interested in economic growth and policies. They think economic freedom is important and want better policies for development. They hear opinions from economists, policymakers, and the media. They see economic news, country comparisons, and global rankings. They talk about economic reforms, analyze data, and support good policies..

Brainstorm & Idea Prioritization:

This project aims to develop a comprehensive and data-driven index that measures the level of economic freedom across countries or regions and analyzes its relationship with prosperity, growth, and overall well-being. By examining key indicators such as property rights protection, regulatory efficiency, government size, fiscal health, trade openness, and market transparency, the study seeks to quantify how economic policies influence economic performance and societal development. Drawing inspiration from established frameworks like the The Heritage Foundation's Index of Economic Freedom and the Fraser Institute's Economic Freedom of the World Report, this project will critically evaluate existing methodologies while proposing refined metrics or regional adaptations. Through statistical analysis and comparative case studies, the research will explore correlations between economic freedom and indicators such as GDP growth, employment rates, investment flows, innovation capacity, and poverty reduction. Ultimately, the project aims to provide policymakers, researchers, and stakeholders with a clear, evidence-based tool to assess economic policy environments and guide sustainable economic development strategies.This project focuses on developing a structured and analytical framework to measure the level of economic freedom in different countries or regions and examine how it influences prosperity and long-term development. Economic freedom refers to the extent to which individuals and businesses can make economic decisions—such as investing, trading, working, and producing—without excessive government intervention.

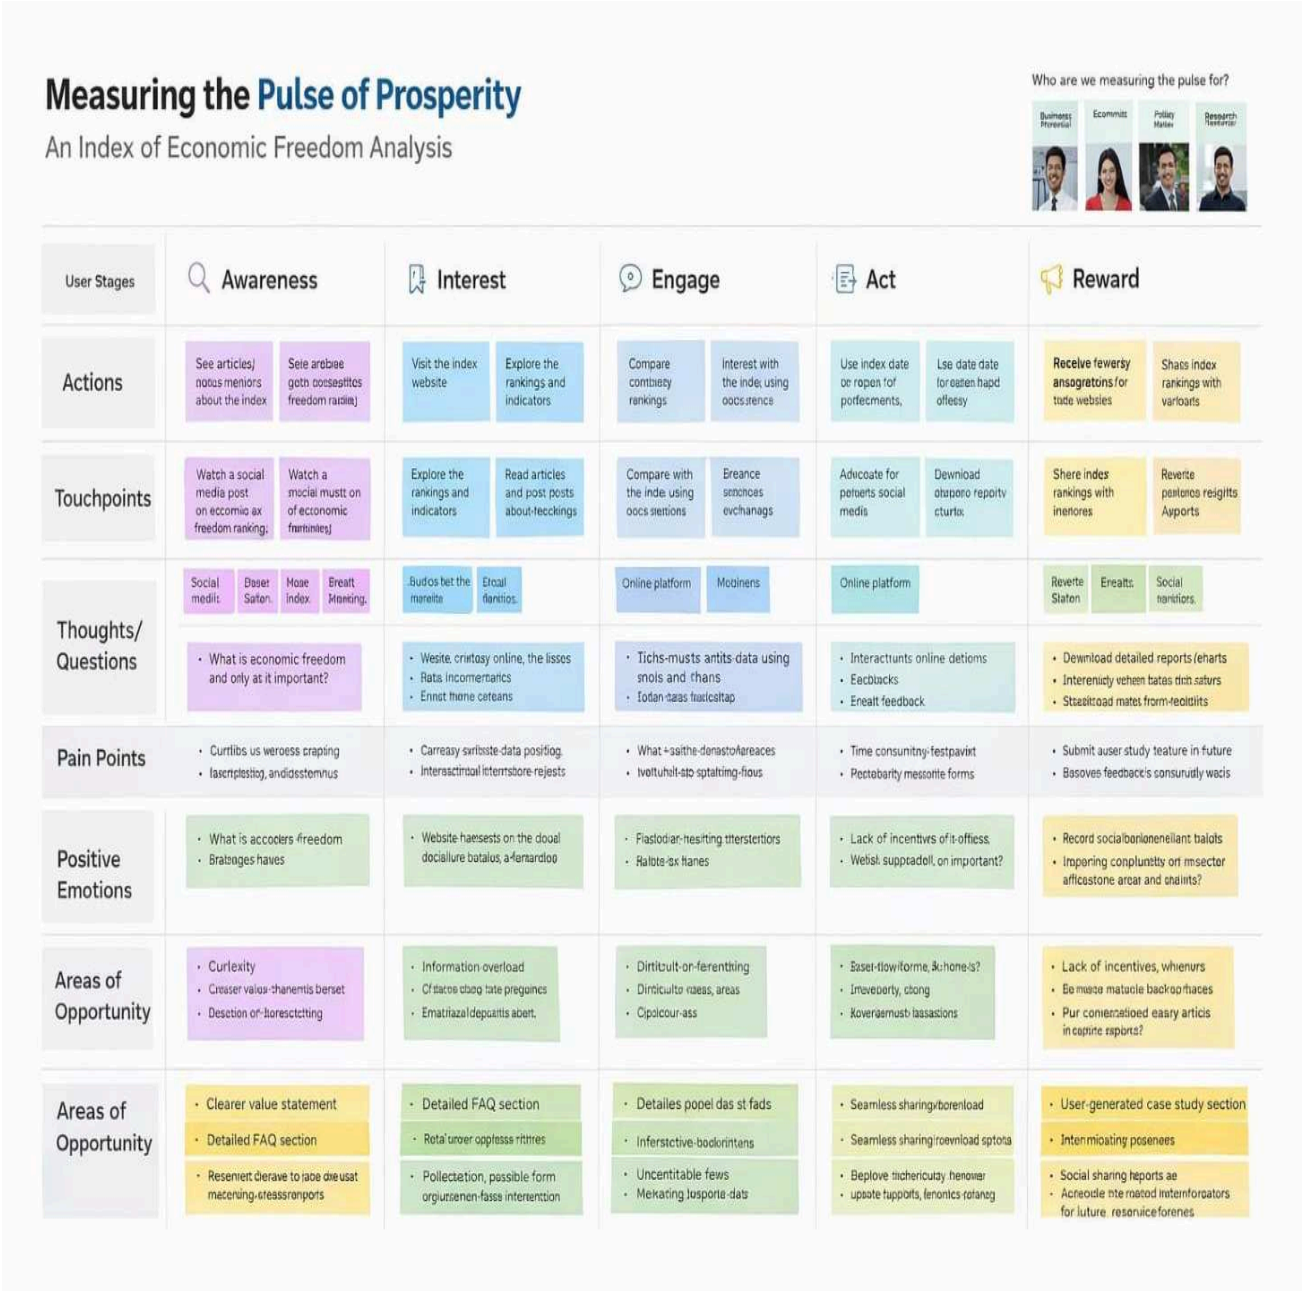
REQUIREMENT ANALYSIS

Customer Journey Map:



Solution Requirement

Functional Requirements:

FR No.	Functional Requirement (Epic)	Description
1.	Data Collection	Data collection is the foundational step in any data-driven project. It involves gathering relevant, accurate, and reliable information from various sources such as databases, APIs, surveys, sensors, or third-party platforms
2.	Working With Dataset	Working with a dataset includes cleaning, organizing, transforming, and preparing data for analysis. This process may involve handling missing values, removing duplicates, standardizing formats, and performing exploratory data analysis (EDA).
3.	Data Visualizations	Data visualization focuses on representing data graphically to make complex information easier to understand. Through charts, graphs, maps, and dashboards, patterns, trends, and outliers become more visible.
4.	Dashboard	A dashboard is an interactive interface that displays key metrics and insights in a consolidated view. It allows users to monitor performance, track progress, and explore data dynamically.
5.	Story	Data storytelling combines data, visuals, and narrative to communicate insights in a compelling and understandable way. It goes beyond numbers by providing context, highlighting key findings, and guiding the audience toward actionable conclusions.
6.	Publishing & Web Integration	Publishing and web integration involve deploying dashboards, reports, or data applications to online platforms for public or organizational access. This step ensures accessibility, responsiveness, and seamless integration with websites or enterprise systems
7.	Performance Testing	Performance testing evaluates how a data system, dashboard, or application behaves under various conditions, including high traffic or large datasets. It helps identify bottlenecks, optimize load times, and ensure reliability.

Non-functional Requirements:

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The system shall provide an intuitive UI with minimal training required.
NFR-2	Security	The system shall protect sensitive data using encryption and secure authentication.
NFR-3	Reliability	The system shall ensure accurate index calculations without data loss.
NFR-4	Performance	The system shall load dashboards within 3 seconds.
NFR-5	Availability	System shall be available 99% of the time annually
NFR-6	Scalability	System shall handle increasing data volume and users.

Data Flow Diagram

Data Flow Diagram (DFD) can be described in paragraph format as follows:The system begins with external data sources such as international financial institutions, government statistical agencies, research organizations, and global economic databases. These sources provide raw data inputs including GDP growth rates, tax policies, trade openness, business regulations, property rights indicators, inflation rates, and labor market statistics. The collected data flows into the Data Collection Module, where information is gathered through APIs, reports, spreadsheets, or manual entry. From there, the data moves to the Data Validation and Cleaning Process.

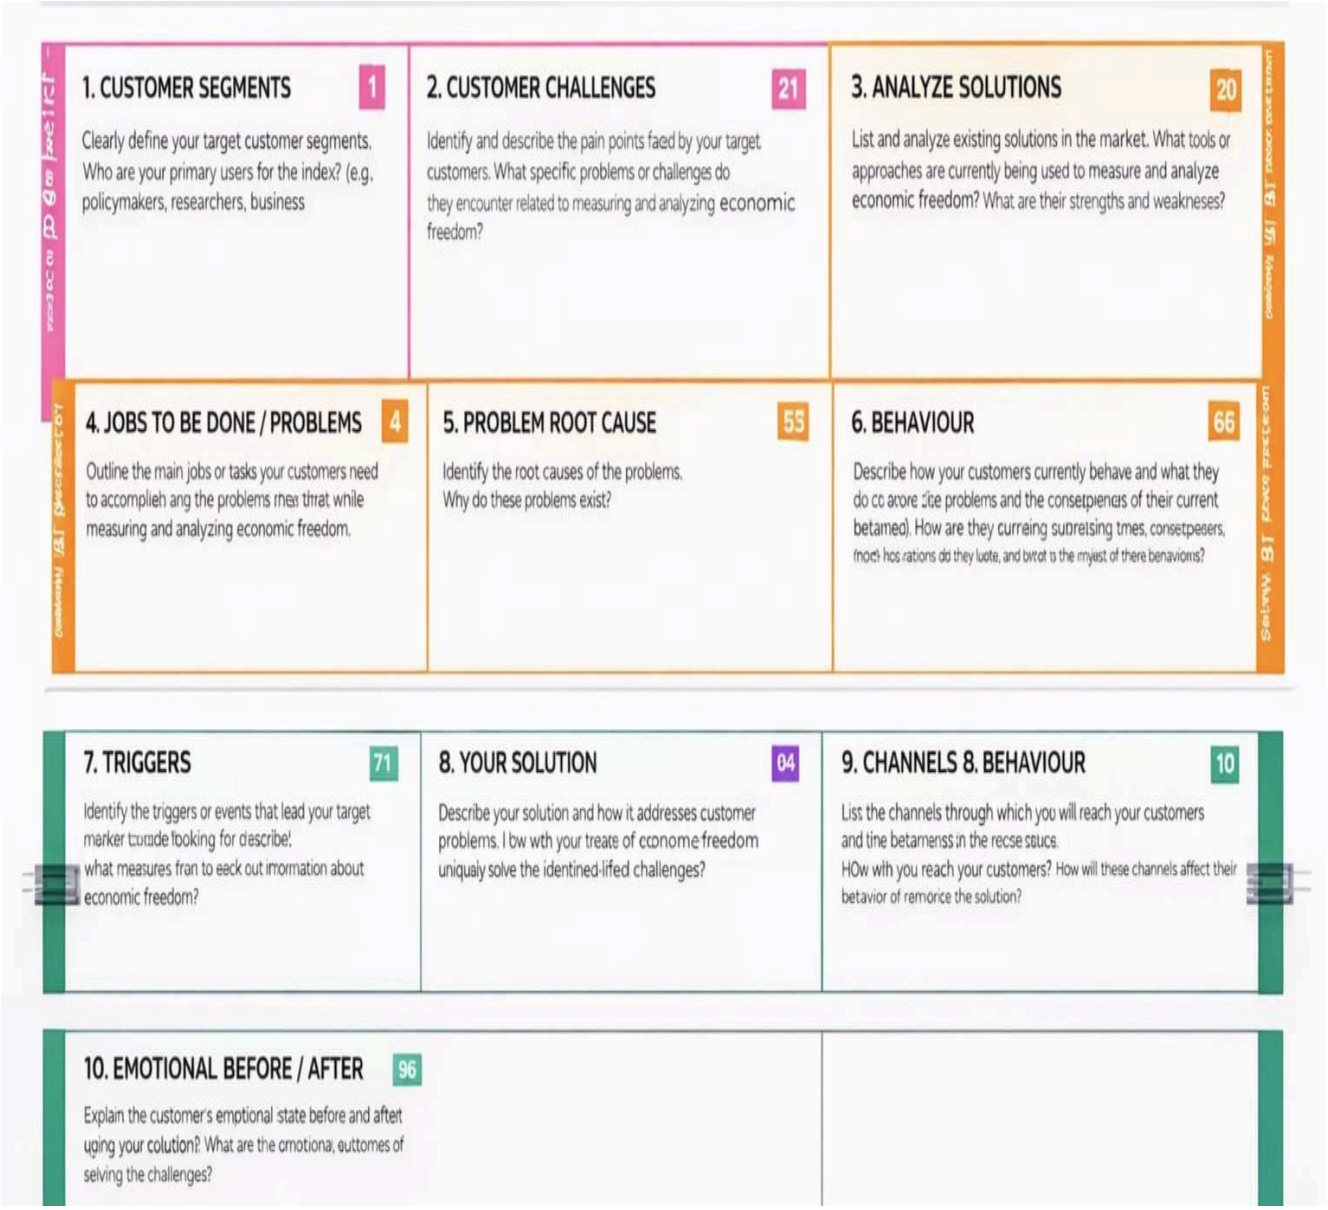
Problem Solution Fit



Proposed Solution:

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	There is a lack of simplified, comparative, and data-driven understanding of how economic freedom influences prosperity across countries/regions. Existing reports are often complex, scattered, or not easily interpretable by students, policymakers, and the general public. The problem is to analyze, quantify, and interpret economic freedom indicators to understand their impact on economic growth and prosperity.
2.	Idea / Solution description	The project proposes to develop a structured analytical framework that evaluates economic freedom using key indicators such as rule of law, government size, regulatory efficiency, and market openness. The solution will involve collecting secondary data, constructing a composite index, comparing countries/regions, and using statistical tools and visualizations (charts/graphs) to interpret the relationship between economic freedom and prosperity indicators like GDP per capita, employment rate, and business growth.
3.	Novelty / Uniqueness	The uniqueness of this project lies in simplifying complex economic freedom data into an easy-to-understand composite index with clear visual representation. It integrates economic theory with practical data analysis and may include trend analysis over multiple years to measure progress. The project may also provide customized ranking or regional comparison for better academic insight.
4.	Social Impact / Customer Satisfaction	The study helps policymakers, researchers, and students understand how economic policies influence national prosperity. It raises awareness about the importance of economic freedom in promoting entrepreneurship, investment, and employment. By presenting data clearly, it supports informed decision-making and academic learning.
5.	Business Model (Revenue Model)	Though primarily academic, the model can be extended into a research-based consultancy or analytics platform providing economic policy reports, customized country analysis, and subscription-based access to data dashboards. Revenue could be generated through institutional subscriptions, research collaborations, and policy advisory services.
6.	Scalability of the Solution	The framework can be scaled by including more countries, adding real-time data integration, developing an interactive dashboard, or expanding into sector-specific economic freedom analysis. It can also be adapted for state-level or regional analysis within a country, making it flexible and expandable.

Solution Architecture:

The solution architecture for “Measuring the Pulse of Prosperity: An Index of Economic Freedom Analysis” is designed as a structured, data-driven analytical framework consisting of four main layers: data collection, data processing, index construction, and visualization & reporting. In the first layer, secondary data is collected from reliable international databases and economic reports covering key dimensions such as rule of law, government size, regulatory efficiency, and market openness, along with prosperity indicators like GDP per capita, employment rate, and investment levels. In the second layer, the collected data is cleaned, normalized, and standardized to ensure consistency across countries and years.

ADVANTAGES

- Measures Economic Performance
- Encourages Investment and Entrepreneurship
- Policy Guidance for Governments
- Promotes Individual Freedom
- International Comparison Tool

DISADVANTAGES

- Overemphasis on Free Markets
- Ignores Social Inequality
- Methodological Bias
- Limited Cultural and Political Context
- Environmental and Social Concerns.

CONCLUSION

The Index of Economic Freedom serves as an important tool for understanding how economic policies influence prosperity and development. Countries that maintain strong property rights, open markets, and limited regulatory barriers often experience higher economic growth and improved living standards. However, economic freedom alone cannot guarantee inclusive development or social welfare. A balanced approach combining market efficiency with social responsibility, environmental sustainability, and equitable policies is essential for long-term prosperity.
